

## Anti-INDO(Indoleamine 2,3-dioxygenase) Polyclonal Antibody

Cat. #: 60B107

### Description:

Gamma-interferon (IFN $\gamma$ ) has an antiproliferative effect on many tumor cells and inhibits intracellular pathogens such as *Toxoplasma* and *Chlamydia*, at least partly because of the induction of indoleamine 2,3-dioxygenase (INDO). This enzyme catalyzes the degradation of the essential amino acid L-tryptophan to N-formylkynurenine. Induction of IDO in airway epithelial-like tumor cells by exposure to IFN $\gamma$  markedly amplifies IL-6 and IL-8 responses via depletion of tryptophan from the culture medium.

### Immunogen/Specificity:

Polyclonal antibody produced in rabbits immunizing with a synthetic peptide corresponding to Middle residues of human INDO (Indoleamine 2,3-dioxygenase)

Clone Number:

Isotype:

Species: human

Storage and Stability: at -20°C

### Storage buffer:

This antibody is stored in PBS, 0.01% sodium azide and 50% glycerol.

### Preparation:

Purified by antigen-specific affinity chromatography.

### Applications :

ELISA

Western Blotting (1  $\mu$ g/ml for 2hrs)
