#### Mouse Monoclonal Antibody Cleaved PARP1 conjugated to Sepharose Beads

CatalogNo: ANT8021-M

Size 200ul

Storage Store at 4 °C for frequent use

Description

This Antagene antibody is immobilized by the covalent reaction of hydrazinonicotinamidemodified antibody with formylbenzamide-modified beads. It is useful for immunoprecipitation.

### Cleaved PARP1 (ANT0046R) Rabbit mAb

Formulation: Each vial contains 1mg/ml Magnetic Bead in PBS, pH 7.2, 0.05mg ANaN3.

Host Species <ul> <li>Rabbit</li> </ul>	• Human,Mouse,Rat,	Reactivity • WB,IHC,IF,IP,ELISA	Applications
MW • 25kD (Calco 25kD (Observ	,	Isotype	

## Recommended Dilution Ratios

#### P Basic Information

Clonality

Monoclonal

# Immunogen Information Specificity

Endogenous
------------

Gene name	PARP1					
Protein Name	Poly [ADP-ribose] polymerase 1					
FIOteni Name						
	Organism	Gene ID	UniProt ID			
	Human	<u>142</u> ;	<u>P09874;</u>			
	Mouse		<u>P11103</u> ;			
Cellular	Cytoplasmic, Nuclear					
Localization						
Tissue specificity Brain, Colon carcinoma, Fibroblast, Lung, Ovarian carcinoma, Skin,						
Function	Catalytic activity:NAD(+) + (ADP-D-ribosyl)(n)-acceptor = nicotinamide + (ADP-Dribosyl)(n+1)-acceptor.,Function:Involved in the base excision repair (BER) pathway, by catalyzing the poly(ADP-ribosyl)ation of a limited number of acceptor proteins involved in chromatin architecture and in DNA metabolism. This modification follows DNA damages and appears as an obligatory step in a detection/signaling pathway leading to the reparation of DNA strand breaks.,miscellaneous:The ADP-D-ribosyl group of NAD(+) is transferred to an acceptor carboxyl group on a histone or the enzyme itself, and further ADP-ribosyl groups are transferred to the 2'-position of the terminal adenosine moiety, building up a polymer with an average chain length of 20-30 units.,ANTM:Phosphorylated by PRKDC. Phosphorylated upon DNA damage, probably by ATM or ATR.,PTM:Poly-ADP-ribosylated by PARP2.,similarity:Contains 1 BRCT domain.,similarity:Contains 1 PARP alpha-helical domain.,similarity:Contains 1 PARP catalytic domain.,similarity:Contains 2 PARP-type zinc fingers.,subunit:Component of a base excision repair (BER) complex, containing at least XRCC1, PARP2, POLB and LIG3. Homo- and heterodimer with PARP2. Interacts with PARP3, APTX and SRY. The SWAP complex consists of NPM1, NCL, PARP1 and SWAP70. Interacts with TIAM2 and ZNF423.,					

## Validation Data

Various whole cell lysates were separated by 4-20% SDS-PAGE, and the membrane was blotted with anti-Cleaved PARP1 (ANT0046R) antibody. The HRP-conjugated Goat anti-Rabbit IgG(H + L) antibody was used to detect the antibody. Lane 1: RAW264.7 Lane 2: Hela Predicted band size: 25kDa

Rat colon tissue was stained with Anti-Cleaved PARP1 (PT0046R) rabbit Antibody

Human tonsil tissue was stained with Anti-Cleaved PARP1 (PT0046R) rabbit Antibody
