Mouse Monoclonal Antibody STAT1 α conjugated to Sepharose Beads

CatalogNo: ANT8042-M

Size 200ul

Storage Store at 4 °C for frequent use

Description

This Antagene antibody is immobilized by the covalent reaction of hydrazinonicotinamide-modified antibody with formylbenzamide-modified beads. It is useful for immunoprecipitation.

STAT1 α (ANT0079R) Rabbit mAb

Formulation: Each vial contains 1mg/ml Magnetic Bead in PBS, pH 7.2, 0.05mg ANaN3.

Host Species
Rabbit Human, Mouse, Rat,
WB, IHC, IF, IP, ELISA

Stype
87kD (Calculated) IgG, Kappa
90kD (Observed)

Recommended Dilution Ratios

Basic Information

Clonality Monoclonal

Clone Number ANT0079R

Immunogen Information Specificity

Endogenous

Gene name

STAT1

Protein Name

Signal transducer and activator of transcription 1-alpha/beta (Transcription factor ISGF-3

components p91/p84)

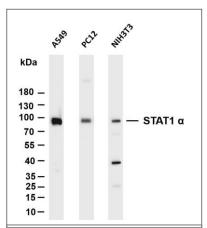

Organism	Gene ID	UniProt ID	
Human	<u>6772</u> ;	<u>P42224</u> ;	
Mouse		<u>P42225;</u>	

Cellular Localization Nuclear

Function

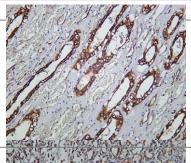

Signal transducer and transcription activator that mediates cellular responses to interferons (IFNs), cytokine KITLG/SCF and other cytokines and other growth factors. Following type I IFN (IFNalpha and IFN-beta) binding to cell surface receptors, signaling via protein kinases leads to activation of Jak kinases (TYK2 and JAK1) and to tyrosine phosphorylation of STAT1 and STAT2. The phosphorylated STATs dimerize and associate with ISGF3G/IRF-9 to form a complex termed ISGF3 transcription factor, that enters the nucleus . ISGF3 binds to the IFN stimulated response element (ISRE) to activate the transcription of IFN-stimulated genes (ISG), which drive the cell in an antiviral state. In response to type II IFN (IFN-gamma), STAT1 is tyrosine- and serine-phosphorylated . It then forms a homodimer termed IFNgamma-activated factor (GAF), migrates into the nucleus and binds to the IFN gamma activated sequence (GAS) to drive the expression of the target genes, inducing a cellular antiviral state. Becomes activated in response to KITLG/SCF and KIT signaling. May mediate cellular responses to activated FGFR1, FGFR2, FGFR3 and FGFR4.

Validation Data

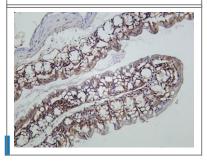

Various whole cell lysates were separated by 4-20% SDS-PAGE, and the membrane was blotted with anti-STAT1 α (ANT0079R) antibody. The HRPconjugated Goat anti-Rabbit IgG(H + L) antibody was used to detect the antibody. Lane 1: A549 Lane 2: PC12 Lane 3: NIH3T3 Predicted band size:

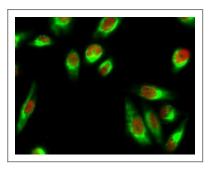

87kDa Observed band size: 90kDa

Rat colon was stained with Anti-STAT1 α (ANT0079R) rabbit antibody Human kidney was stained with Anti-STAT1 α (ANT0079R) rabbit antibody

Mouse colon was stained with Anti-STAT1 α (ANT0079R) rabbit antibody

Immunofluorescence analysis of Hela cell. 1,Stat1 Polyclonal Antibody(red) was diluted at 1:200(4° overnight). p53 Monoclonal Antibody(6C4)(green) was diluted at 1:200(4° overnight). 2, Goat Anti Rabbit Alexa Fluor 594 Catalog:RS3611 was diluted at 1:1000(room temperature, 50min). Goat Anti Mouse Alexa Fluor 488 Catalog:RS3208 was diluted at 1:1000(room temperature, 50min).
