

## Mouse Monoclonal Antibody **Ezrin** conjugated to Sepharose Beads

CatalogNo: **ANT8311-M**

Size 200ul

Storage Store at 4 °C for frequent use

### Description

This Antagene antibody is immobilized by the covalent reaction of hydrazinonicotinamide-modified antibody with formylbenzamide-modified beads. It is useful for immunoprecipitation.

### **Ezrin (ANT0078R) Rabbit mAb**

Formulation: Each vial contains 1mg/ml Magnetic Bead in PBS, pH 7.2, 0.05mg ANaN3.

#### Host Species

- Rabbit
- Human, Mouse, Rat,

#### Reactivity

- WB, IHC, IF, IP, ELISA

#### Applications

#### MW

- 69kD (Calculated)
  - IgG, Kappa
- 80kD (Observed)

#### Isotype

## **Recommended Dilution Ratios**

### **IP**

### **Basic Information**

**Clonality** Monoclonal

**Clone Number** ANT0078R

# Immunogen Information

Specificity Endogenous

Gene name EZR

Protein Name Ezrin

Organism	Gene ID	UniProt ID
Human	<a href="#">7430</a> ;	<a href="#">P15311</a> ;
Mouse	<a href="#">22350</a> ;	<a href="#">P26040</a> ;
Rat	<a href="#">54319</a> ;	<a href="#">P31977</a> ;

Cellular Localization Cytoplasm, Membrane

**Tissue specificity** Expressed in cerebral cortex, basal ganglia, hippocampus, hypophysis, and optic nerve. Weakly expressed in brain stem and diencephalon. Stronger expression was detected in gray matter of frontal lobe compared to white matter (at protein level). Component of the microvilli of intestinal epithelial cells. Preferentially expressed in astrocytes of hippocampus, frontal cortex, thalamus, parahippocampal cortex, amygdala, insula, and corpus callosum. Not detected in neurons in most tissues studied.

**Function** developmental stage:Very strong staining is detected in the Purkinje cell layer and in part of the molecular layer of the infant brain compared to adult brain.,Function:Probably involved in connections of major cytoskeletal structures to the plasma membrane. In epithelial cells, required for the formation of microvilli and membrane ruffles on the apical pole. Along with PLEKHG6, required for normal macropinocytosis.,ANTM:Phosphorylated by tyrosine-protein kinases.,similarity:Contains 1 FERM domain.,subcellular location:Localization to the apical membrane of parietal cells depends on the interaction with MPP5. Localizes to cell extensions and peripheral processes of astrocytes (By similarity). Microvillar peripheral membrane protein (cytoplasmic side).,subunit:Interacts with MPP5 (By similarity). Interacts with SLC9A3R1 and SCYL3/PACE1. Interacts with PLEKHG6. Interacts with NGX6.,tissue specificity:Expressed in cerebral cortex, basal ganglia, hippocampus, hypophysis, and optic nerve. Weakly expressed in brain stem and diencephalon. Stronger expression was detected in gray matter of frontal lobe compared to white matter (at protein level). Component of the microvilli of intestinal epithelial cells. Preferentially expressed in astrocytes of hippocampus, frontal cortex, thalamus, parahippocampal cortex, amygdala, insula, and corpus callosum. Not detected in neurons in most tissues studied.,

# Validation Data

Various whole cell lysates were separated by 4-20% SDS-PAGE, and the membrane was blotted with anti-Ezrin (ANT0078R) antibody. The HRPconjugated Goat anti-Rabbit IgG(H + L) antibody was used to detect the antibody. Lane 1: HCT-116 Lane 2: HeLa Lane 3: C6 Lane 4: NIH-3T3 Predicted band size: 69kDa Observed band size: 80kDa

Human bladder carcinoma was stained with anti-Ezrin (ANT0078R) rabbit antibody

Human kidney was stained with anti-Ezrin (ANT0078R) rabbit antibody

Mouse kidney was stained with anti-Ezrin (ANT0078R) rabbit antibody

Rat kidney was stained with anti-Ezrin (ANT0078R) rabbit antibody
