Mouse Monoclonal Antibody TBK1 conjugated to Sepharose Beads

CatalogNo: ANT8322-M

Size 200ul

Storage Store at 4 °C for frequent use

Description

This Antagene antibody is immobilized by the covalent reaction of hydrazinonicotinamide-modified antibody with formylbenzamide-modified beads. It is useful for immunoprecipitation.

TBK1 (ANT0090R) Rabbit mAb

Formulation: Each vial contains 1mg/ml Magnetic Bead in PBS, pH 7.2, 0.05mg ANaN3.

Host Species Reactivity Applications

Rabbit Human, Mouse, Rat, WB, IHC, IF, IP, ELISA

MW Isotype

84kD (Calculated) IgG, Kappa 84kD (Observed)

Recommended Dilution Ratios

ΙP

Basic Information

Clonality Monoclonal

Clone Number ANT0090R

Immunogen Information

Specificity Endogenous

Gene name TBK1

Protein Name Serine/threonine-protein kinase TBK1

Organism	Gene ID	UniProt ID
Human	<u>29110</u> ;	<u>Q9UHD2</u> ;
Mouse	<u>56480</u> ;	Q9WUN2;

Cellular Cytoplasm

Localization

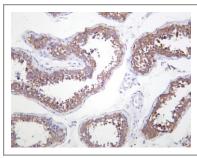

Tissue specificity Ubiquitous with higher expression in testis. Expressed in the ganglion cells, nerve fiber layer and microvasculature of the retina.

Function Catalytic activity:ATP + a protein = ADP + a phosphoprotein.,Function:Serine/threonine

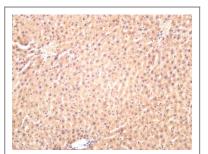

protein involved in the signaling cascade converging to the activation of the transcription factor NF-kappa-B. May function as an IKK kinase, playing an essential role in the transcription of a subset of TNF-alpha-induced genes. Also mediates production of RANTES/CCL5 and interferon-beta/IFNB1. Has a pivotal role in the innate immune response. Phosphorylates Borna disease virus (BDV) P protein. Phosphorylates and activates IRF3 and IRF7 and allows their nuclear localization. This leads to production of alpha/beta interferons and the development of a cellular antiviral state. It also seems to be a central factor in the induction of the antiviral interferon response. Inhibition of its interaction with IRF3, due to HCV NS3 binding or BDV P protein seems to be one mechanism of inhibition of the innate immune responses of hepatitis C virus (HCV) infection or Borna disease virus infection respectively.,similarity:Belongs to the protein kinase superfamily. Ser/Thr protein kinase family. I-kappa-B kinase subfamily.,similarity:Contains 1 protein kinase

domain.,subunit:Interacts with TIRAP, TANK and TRAF2. Part of a ternary complex consisting of TANK, TRAF2 and TBK1. Interacts with AZI2. Interacts with SIKE. Interacts with TICAM1/TRIF, IRF3 and DDX58/RIG-I, interactions are disrupted by the interaction between TBK1 and SIKE. Interacts with HCV NS3, a hepatitis C virus protein and with BDV P protein, a Borna disease virus protein.,tissue specificity:Ubiquitous with higher expression in testis.,

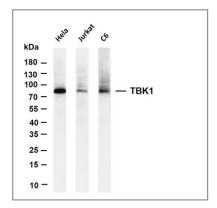

Validation Data

Human testis was stained with anti-TBK1 (ANT0090R)

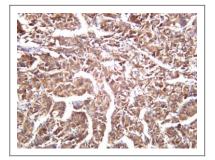

rabbit antibody
Rat liver was stained with anti-TBK1 (ANT0090R) rabbit antibody

Various whole cell lysates were separated by 4-20% SDS-PAGE, and the membrane was blotted with anti-TBK1 (ANT0090R) antibody. The HRPconjugated Goat anti-Rabbit IgG(H + L) antibody was used to detect the antibody. Lane 1: Hela Lane 2: Jurkat Lane 3: C6 Predicted band size: 84kDa

Observed band size: 84kDa

Human hepatocellular carcinoma was stained with anti-TBK1 (ANT0090R) rabbit antibody
