

Anti-PKD2(Polycystin 2) Polyclonal Antibody

Cat. #: 60B506

Description:

PKD2(Polycystin 2) functions as a calcium permeable cation channel. PKD1 and PKD2 may function through a common signaling pathway that is necessary for normal tubulogenesis. It interacts with PKD1. PKD1 requires the presence of PKD2 for stable expression. PDK2 belongs to the polycystin family.

Immunogen/Specificity:

Polyclonal antibody produced in rabbits immunizing with a synthetic peptide corresponding to C-terminal residues of mouse Pkd2 (Polycystin 2)

Species: mouse, human

Storage and Stability: at -20oC

Storage buffer:

This antibody is stored in PBS, 0.01% sodium azide and 50% glycerol.

Preparation:

Purified by antigen-specific affinity chromatography.

Applications :

ELISA

Western Blotting (1µg/ml for 2hrs)
