

Anti-Nkx6.2(NK6 transcription factor related, locus 2) Polyclonal Antibody

Cat. #: 60B710

Description:

Homeodomain proteins play critical roles during development in cell fate determination and proliferation. The Nkx6-2 is active embryonically in neuroblasts and postnatally in oligodendrocytes. The Nkx6-2 directly or indirectly regulates axon-glia interactions at myelin paranodes. Nkx6-2 does not appear to be the central regulator of axoglial junction assembly.

Immunogen/Specificity:

Polyclonal antibody produced in rabbits immunizing with a synthetic peptide corresponding to N-terminal residues of human Nkx6.2 (NK6 transcription factor related, locus 2)

Clone Number:

Isotype:

Species: human, mouse

Storage and Stability: at -20oC

Storage buffer:

This antibody is stored in PBS, 0.01% sodium azide and 50% glycerol.

Preparation:

Purified by antigen-specific affinity chromatography.

Applications :

ELISA

Western Blotting (1µg/ml for 2hrs)
