

Anti-AMFR(Autocrine motility factor receptor, isoform 2) Polyclonal Antibody

Cat. #: 60B865

Description:

AMFR (Autocrine motility factor receptor, isoform 2) is specific receptor for the autocrine motility factor. AMFR possesses ubiquitin ligase activity and can target both itself and other proteins including CD3D and APOB for proteasomal degradation. AMFR mediates tumor invasion and metastasis. The protein interacts with UBE2G2/UBC7 through a region distinct from the RING finger.

Immunogen/Specificity:

Polyclonal antibody produced in rabbits immunizing with a synthetic peptide corresponding to N-terminal residues of human AMFR (Autocrine motility factor receptor, isoform 2)\

Clone Number:

Isotype:

Species: human, mouse

Storage and Stability: at -20oC

Storage buffer:

This antibody is stored in PBS, 0.01% sodium azide and 50% glycerol.

Preparation:

Purified by antigen-specific affinity chromatography.

Applications :

ELISA

Western Blotting (1µg/ml for 2hrs)
