

## **Anti-TATC (Sec-independent protein translocase protein tatC homolog) Polyclonal Antibody**

**Category:** Polyclonal Antibody

**Catalog #:** AB3H221

**Species Reactivity:** Bacteria Helicobacter pylori

### **Immunogen/Specificity:**

Polyclonal antibody produced in rabbits immunizing with a synthetic peptide corresponding to N-terminal residues of Bacteria Helicobacter pylori TATC (Sec-independent protein translocase protein tatC homolog)

**Description:** The tatC (Sec-independent protein translocase protein tatC homolog) is required for correct localization of precursor proteins bearing signal peptides with the twin arginine conserved motif S/T-R-R-X-F-L-K. This sec-independent pathway is termed TAT for twin-arginine translocation system. This system mainly transports proteins with bound cofactors that require folding prior to export. tatC (Sec-independent protein translocase protein tatC homolog) localizes in cell inner membrane. It is a multi-pass membrane protein (Probable). tatC belongs to the tatC family.
