

## Product Information Sheet

### Monoclonal Anti- $\alpha$ -Fetoprotein, AFP (Sepharose Bead Conjugate)

**Catalogue No.** MA1001-S

**Lot No.** 08A12

**Clone:** AP-1

**Ig type:** mouse IgG2a

**Size:** 200 $\mu$ l

**Specificity**

Human.

No cross reactivity with other proteins.

**Recommended application**

*Immunoprecipitation(IP)*

**Immunogen**

Human  $\alpha$ -fetoprotein

**Purification**

Purified by the goat anti-mouse IgG affinity chromatography.

**Formulation**

50% slurry in PBS pH 7.2 with 0.01mg NaN<sub>3</sub> preservative.

**Storage**

Store at 4°C for frequent use.

**Description:**

This Antagene antibody is immobilized via covalent binding of primary amino groups to N-hydroxysuccinimide (NHS)-activated sepharose beads. It is useful for immunoprecipitation assays

### BACKGROUND

Alpha-fetoprotein (AFP) is a major plasma protein in the fetus, where it is produced by the yolk sac and liver. Direct confirmation of the assignment of the AFP gene to chromosome 4 by in situ hybridization was provided by Harper and Dugaiczky (1983), who placed the gene in the q11-q22 region, the same region as the albumin gene. Structure and evolution of human alpha-fetoprotein deduced from partial sequence of cloned cDNA. As the major fetal serum protein, Alpha-fetoprotein is not essential for embryonic development but is required for female fertility.
