

## Product Information Sheet

### Monoclonal Anti-Paxillin Magnetic Bead Conjugate

**Catalogue No.** MA1080-M

**Immunogen**

C-terminal part of recombinant chicken paxillin (amino acids 305-559)

**Lot No.** 08A12

**Purification**

Purified by the goat anti-mouse IgG affinity chromatography.

**Clone:** PAX-14

**Ig type:** mouse IgG1

**Formulation**

Each vial contains 1mg/ml Magnetic Bead in PBS, pH 7.2, 0.05mg NaN<sub>3</sub>.

**Size:** 200µl

**Storage**

Store at 4°C for frequent use.

**Specificity**

Human, mouse, rat, chicken

No cross reactivity with other proteins.

**Description**

This Antagene antibody is immobilized by the covalent reaction of hydrazinonicotinamide-modified antibody with formylbenzamide-modified beads. It is useful for immunoprecipitation.

**Recommended application**

*Immunoprecipitation(IP)*

#### BACKGROUND

The paxillin gene can be alternatively spliced to include 1 of 2 alternative exons, generating beta and gamma isoforms. Paxillin is a 68-kDa focal adhesion protein that is phosphorylated on tyrosine residues in fibroblasts in response to transformation by v-src, treatment with platelet-derived growth factor, or cross-linking of integrins. The 68-kD protein (paxillin) is a cytoskeletal component that localizes to the focal adhesions at the ends of actin stress fibers in chicken embryo fibroblasts. It is also present in the focal adhesions of Madin-Darby bovine kidney (MDBK) epithelial cells but is absent, like talin, from the cell-cell adherens junctions of these cells.
