

## Product Information Sheet

### **Polyclonal Anti-C-C Chemokine Receptor 7, CCR7 (Magnetic Bead Conjugate)**

**Catalogue No.** PA1017-M

#### **Immunogen**

**Lot No.** 0101112011762

A synthetic peptide corresponding to a sequence mapping at the N-terminal of human CCR7, different from the related rat and mouse sequence by a single amino acid.

**Ig type:** rabbit IgG

#### **Purity**

**Size:** 100µg/vial

Immunogen affinity purified.

#### **Specificity**

Human, rat.

No cross reactivity with other proteins.

#### **Contents**

Each vial contains 1mg/ml Magnetic Bead in PBS, pH 7.2, 0.05mg NaN<sub>3</sub>.

#### **Storage**

Store at 4°C for frequent use.

#### **Recommended application**

ImmunoPrecipitation (IP)

#### **Description**

This Antagene antibody is immobilized by the covalent reaction of hydrazinonicotinamide-modified antibody with formylbenzamide-modified magnetic beads. It is useful for immunoprecipitation

## **BACKGROUND**

Schweickart et al. identified CCR7(also known as EBI1) in 1994, which is a lymphoid-specific member of the G protein-coupled receptor family. This gene, which is encoded on human chromosome 17q12-q21.2, is expressed in normal lymphoid tissues and in several B- and T-lymphocyte cell lines with 86% identity to the mouse homolog. It is also related to the receptors that recognize chemoattractants, such as interleukin-8, RANTES, C5a, and fMet-Leu-Phe. Expression of CCR7 controls homing to secondary lymphoid organs, divides human memory T cells into two functionally distinct subsets.
