

**Polyclonal Anti- Interleukin-1 alpha, *IL-1α* (Sepharose Bead Conjugate)**

**Catalogue No.** PA1375-S

**Lot No.** 0131112067527

**Ig type:** rabbit IgG

**Size:** 100µg/vial

**Specificity**

Mouse. No cross reactivity with other proteins.

**Recommended application**

(Immunoprecipitation(IP))

**Immunogen**

A synthetic peptide corresponding to a sequence at the C-terminal of mouse IL-1α (256-270 aa), identical to the related mouse and rat sequence.

**Purification**

Immunogen affinity purified.

**Formulation**

50% slurry in PBS pH 7.2 with 0.01mg NaN<sub>3</sub> preservative.

**Storage**

Store at 4°C for frequent use.

**Description:**

This Antagene antibody is immobilized via covalent binding of primary amino groups to N-hydroxysuccinimide (NHS)-activated sepharose beads. It is useful for immunoprecipitation assays

**BACKGROUND**

Interleukin-1 alpha (IL-1α) is a protein that in humans is encoded by the IL1A gene. The protein encoded by this gene is a cytokine of the interleukin-1 family. Interleukin-1 alpha possesses a wide spectrum of metabolic, physiological, haematopoietic activities, and plays one of the central roles in the regulation of the immune responses. It binds to the interleukin-1 receptor. Silver et al. (1990) showed that the mouse Il1a and Il1b genes are contained in a genomic fragment of about 70 kb. Further studies suggested that Il1b lies 5-prime to Il1a, that the 2 genes are oriented in the same direction, and that they are separated by about 50 kb.
